

June 2023

To Whom It May Concern

European Directive 2015/863/EU RoHS 3

With reference to the above Directive, Technifast does not manufacture equipment of these descriptions, but manufactures and distributes components sometimes used in such equipment.

There are two areas where the Directive affects our products: -

Hexavalent Chromium

This material is used as a plating on three of our products – Linch Pins, Shaft-Locking Pins and Series 300 Inserts. These products are not regularly used in the industries covered by the Directive but if required, an alternative plating should be specified.

Lead

This material is used as an alloy to improve machineability in various steel parts. On 21.07.2021, the exemption 6(a) expires for certain categories of electrical and electronic equipment for articles that we manufacture from lead-containing material. Until then lead up to 0.35% is permissible.

From 21.07.2021 a limit of 0.1% will apply.

Products affected are Steel Dowel Pins, Groove Pins, Taper Pins, Clevis Pins and Threaded Spacers.

No other restricted substances are present in our products.

This information is provided to the best of our knowledge and applies to standard parts within our range. Some custom-made parts may not be compliant with RoHS regulations and would be addressed by a case-by-case basis.

Yours Faithfully
